

**List of all pending claims:**

1-8. (Claims 1-8 are canceled)

9. (Previously presented) A method for presenting content to an audience during a presentation, comprising:

receiving first and second voice inputs from first and second audience members;

determining the identity of the first and second audience members, wherein

the determining the identity step further comprises receiving a preamble from a microphone, the preamble being used to identify the audience member.;

determining the relative privilege of the first and second audience members; and

presenting content to the audience from one of the first and second audience members depending on the determined relative privilege of the first and second audience members.

10. (Original) The method of claim 9, wherein the relative privilege of the first and second audience member is influenced by a record of which one of the first and second audience member that last presented content.

11. (Previously presented) The method of claim 10, wherein a higher relative privilege is assigned to the one of the first and second audience member that last presented content.

12. (Previously presented) The method of claim 10, wherein a lower relative privilege is assigned to the one of the first and second audience member that last presented content.

13. (Original) The method of claim 10, wherein the relative privilege is influenced according to which one of the first and second audience members that has not previously presented content during the session.

14. (Original) The method of claim 9, wherein the relative privilege is manually reassigned by a session manager.

15. (Original) The method of claim 9, wherein the relative privilege of the first audience member is gradually reduced as the first audience member begins providing voice inputs.

16. (Previously presented) A system for presenting content, comprising:  
a display device for displaying content to an audience;  
a content manager for controlling the displayed content, the content manager operating under the control of an audience member; and  
a speaker recognition device for determining the identity of an audience member controlling the content manager, wherein the speaker recognition device receives a preamble from a microphone to identify the audience member.

17. (Original) The system of claim 16, further comprising a voice to text converter coupled to the speaker recognition device that converts voice inputs from the audience member into text and for conveying the text to the content manager.

18. (Previously presented) The system of claim 16, wherein the content manager receives text and formats the text for display by the display device.

19. (Previously presented) The system of claim 16, wherein the content manager formats text for display in a predetermined region of a slide presented by way of the display device.

20. (Canceled)

21. (Previously presented) The system of claim 16, wherein the speaker recognition device monitors a plurality of input channels through which the voice inputs from the audience members are conveyed.

22-23. Canceled

24. (Original) The system of claim 16, wherein the speaker recognition device receives a nonaudible tone from at least one microphone associated with the audience member to determine the identity of the at least one audience member.

25. (Original) The system of claim 16, wherein the content manager is redirected under the control of the audience member.

26. (Original) The system of claim 16, wherein the content manager further comprises a connection to the Internet for importing content from the Internet for display by the display device.

27. (Previously presented) The system of claim 16, wherein the content manager, in response to receiving voice inputs from a plurality of audience members, formats for display on the display device only text corresponding to the audience member having the highest relative privilege.

28. (Original) The system of claim 16, additionally comprising a timing device coupled to the content manager, wherein, in response to a first timing signal, the content manager displays text only from audience members having a first relative level of privilege.

29. (Original) The system of claim 28, wherein, in response to a second timing signal, the content manager displays text only from audience members having a second relative level of privilege.

30. (Original) The system of claim 16, further comprising a frame capture device coupled to the display device for occasionally capturing and storing an image of the content displayed by the display device.

31. (Previously presented) A system for presenting content to an audience, comprising:

means for presenting content to an audience;

means for receiving voice commands from a plurality of audience members, the means for receiving voice commands receiving a preamble from microphones used by each of the plurality of the audience members, the preamble being used to identify the audience member;

means for determining the relative privilege levels of the plurality of audience members; and

means for selecting the presented content in response to the voice commands and the privilege levels that correspond to each of the plurality of the audience members.

32. (Canceled)

33. (Original) The system of claim 31, wherein the means for receiving the voice inputs from the plurality of microphones includes means for receiving a nonaudible tone from at least one of the plurality of microphones.

34. (Previously presented) The system of claim 31, further comprising means for determining the time remaining in a presentation, the means for determining the time remaining in the presentation being used to limit the content selected for presenting to the audience by the means for selecting the projected content.

35. (Original) The system of claim 31, additionally comprising means for storing a record of the presented content, wherein the presented content includes voice inputs from the audience and imported content.
